

Guillotine Card Box Assembly Instructions:

Note: Dry fit all pieces together before gluing to make sure everything fits. Because wood is a natural material, there may be some light sanding needed.

- 1 - Place inner center wall (A) on base (B) at 90° to the base (piece (A) is delicate, be careful!)
- 2 - Then add the side walls (C & D) at 90° to the base, gluing the tabs of (A) into the long side walls. (D) is NOT symmetrical, the longer side goes toward the top.
- 3 - Glue the two walls without finger joints (E) to the inside of the side walls (D). Make sure there is no squeeze out, as this is going to form the bottom rail for the lid (G/H) to slide on.
- 4 - Add the top of the short rails (F) to the sides (D) at 90 degrees
- 5 - Add the long rail (H) to the lid (G) facing up (90 degrees).
- 6 - Wait for all glue to dry, then slide lid into slot formed by (E) and (F)
